

SITE LOCATION

Epic Engineering is pleased to present our plan to provide engineering design solutions for developing the Fenton Parkway Bridge construction. In San Diego, Epic Engineering provides public agencies services, including civil engineering, structural engineering, construction engineering, transportation engineering, and geotechnical engineering services. Our firm can also provide services, such as Stormwater Treatment and Traffic Development.

At the intersection of Camino Del Rio North and Fenton Parkway, the Fenton Parkway Bridge will consist of a two-lane road extending Fenton Parkway south over the San Diego River to Camino Del Rio North at the trolley crossing, with left-turn lanes from southbound Fenton Parkway to Camino del Rio North and eastbound Camino Del Rio North to Fenton Parkway, and traffic signal alterations. The Fenton Parkway Bridge is a priority project of the City of San Diego. For more than 30 years, the City's long-range planning documents for the Mission Valley community have been considered an independent local facility that serves the needs of the local community and benefits the public.
