

# CSU San Marcos Palm Canyon Dr. Extension

## Project Overview

The CSU San Marcos Project will extend Palm Canyon Drive to La Moree Road and add additional concrete foundation pads for future student housing. These renovations would be located on the campus of CSU San Marcos and were chosen to be constructed because the university predicted an increased growth of their campus. The hilly terrain is made up of a shallow array of soils and then below exists hard granitic rock. It is the goal of Rainy Day Engineering Group to provide CSUSM with services that will take into account the needs of the university, the community, and the natural environment of Palm Canyon.
